

NEW REPAIR & SYSTEM TEST CAPABILITY

Vacuum Test Capability

Technical Bulletin

K+S Services utilizes a number of various pieces of testing equipment to fully test all vacuum products. We use the Varian 959 Porta-Test Leak Detector which has a minimum detectable signal / sensitivity of 2×10^{-8} atm cc/sec (helium) sniffing mode to detect leaks in accordance with AVS standard 2.1 .

We also use the “SenTorr” gauge controller in conjunction with the “524 Cold Cathode Ionization” gauge to measure vacuum down to 1×10^{-8} Torr. We additionally utilize the “ConvecTorr” gauge to test 1×10^{-3} Torr to atmosphere.

12 Month In-Service Warranty

All Units Are System Tested

No Charge Evaluation
